PROFESSIONAL SUMMARY

AI/ML Enthusiast and Computer Science Engineering student with hands-on experience in Machine Learning, Generative AI, Flask Development, and Project Management tools. Skilled in Python, Scikit-learn, REST APIs, Power BI, Jira, Agile Methodology, and Data Analytics. Developed AI-powered applications including emergency response systems, crop disease detection platforms, intelligent assistants, and automation solutions. Passionate about building scalable technology solutions and managing projects from planning to deployment.

EDUCATION

Parul Institute of Technology

B.Tech in Computer Science Engineering | CGPA: 7.12/10

Vadodara, Gujarat

2023 – 2027

- Class XII (RBSE): 81.40%
- Class X (RBSE): 90%

TECHNICAL SKILLS

Languages:	Python, Java, SQL
AI/ML:	Machine Learning, Scikit-learn, Pandas, NumPy, NLP
Web Development:	Flask, HTML, CSS, REST APIs
Databases:	MySQL, MongoDB
Core Subjects:	DSA, DBMS, OS, Computer Networks
Project Management & Analytics:	Jira, Trello, Agile, Scrum, Power BI, Excel Reporting
Tools & Soft Skills:	Git, GitHub, VS Code, Jupyter Notebook, Problem Solving, Team Collaboration, Communication, Leadership, Stakeholder Coordination

PROJECTS

AI Career Agent – AI-Powered Job Application Platform

Generative AI, Flask, APIs

- Developed an AI-powered career assistant capable of analyzing resumes and generating personalized job recommendations.
- Implemented ATS-friendly resume analysis, skill extraction, and intelligent career guidance workflows.
- Integrated Generative AI APIs for automated cover letter generation and job matching.
- Designed a user-friendly dashboard for tracking opportunities and career growth insights.

ReliefAI – AI Emergency Response System

Flask, Gemini API, Render

- Developed an AI-powered emergency response platform using Flask and Gemini API for disaster routing.
- Implemented intelligent incident prioritization logic and real-time emergency tracking coordinates.
- Deployed the application on Render integrating a seamless GitHub-based CI/CD workflow.
- Submitted as a spotlight project in the Solution Challenge 2026 Build with AI Hackathon.

AI-Based Crop Disease Detection & Farm Management

Machine Learning, Python

- Built an AI-powered crop disease detection system using CNN models for image-based classification.
- Integrated farm management modules and trackers for ongoing crop monitoring and farmer support.
- Collaborated in testing, secure backend REST API integration, and agricultural analytics features.

House Price Prediction using Machine Learning

Scikit-learn, Jupyter Notebook

- Built Linear and Multiple Regression forecasting models in Python with Scikit-learn.
- Performed thorough data preprocessing, feature engineering, and cross-validation performance evaluation.
- Achieved approximately 98% R^2 score through optimized regression regularizations and parameter tuning.

CERTIFICATIONS

- IBM Artificial Intelligence Fundamentals
- AWS Academy Graduate – Cloud Foundations
- NPTEL – Computer Networks and Internet Protocol
- Deloitte Australia Data Analytics Job Simulation
- Modern Frontend Development – Parul University
- Design and Analysis of Algorithms – CodeTantra
- Hands-on Technical Workshop on Generative Artificial Intelligence (Gen AI) – Parul University

ACHIEVEMENTS & ACTIVITIES

- Participated in global Google Solution Challenge 2026 Build with AI Hackathon, engineering ReliefAI.
- Developed and successfully deployed multiple advanced AI/ML applications using Python, Flask, and Scikit-learn.
- Participated actively in college-wide coding tournaments, technical workshops, and peer-to-peer code reviews.
- Represented university teams in the Projections 2024 Technical Festival at Parul University.
- Built and deployed 5+ projects in AI, Machine Learning, Flask Development, and Web Technologies.
